Nairobi, Kenya

PROFESSIONAL PROFILE

TypeScript/JavaScript developer specializing in backend engineering, REST APIs, and full-stack applications. Builds scalable, maintainable systems with clean architecture and strong testing practices. Proficient in Node.js, React, Next.js, and PostgreSQL.

Technical Skills

Languages: TypeScript and JavaScript.

Frameworks: React, Next.js, Node.js, Express.js, Tailwind.

Tools: Git, PostgreSQL, MySQL, Vitest, Figma, Postman.

SELECTED TECHNICAL PROJECTS

1. Log Ingestion Engine

Distributed Log Processing & Observability System | Completed

Built a centralized log ingestion pipeline for receiving, validating, enriching, buffering, and processing logs from distributed services. Core system developed in TypeScript with strong typing and modular architecture. Integrated RabbitMQ for reliable async communication between producers and consumers. Implemented batching, buffering, rate limiting, retry logic, and dead-letter handling. Designed failure isolation to prevent pipeline disruption. Automated unit/integration testing with Vitest

Tech: TypeScript, Node.js, Express.js, RabbitMQ, SQLite, Vitest

2. Travel Planner

Full-Stack Travel Planning & Organization Platform | Active Development

Building a comprehensive travel planning platform for managing destinations, itineraries, activities, and schedules. Architecting with modular components and defined business logic. Developing backend APIs for trip management. Designing responsive interface for travel

organization. Applying type-safe development, API-driven architecture, reusable components, and persistent storage.

Tech: TypeScript, JavaScript, React, Express.js, PostgreSQL

EDUCATION

Reduzer School - Software Development

September 2025 – September 2026 | Kenya

Intensive, project-driven software development training with emphasis on:

- TypeScript & JavaScript
- Backend Engineering
- REST API Development
- PostgreSQL & Database Systems
- Software Architecture
- Automated Testing
- Git & GitHub
- Full-Stack Web Development
- System Design
- Problem Solving

Expected Graduation: September 2026

SOFTWARE DEVELOPMENT JOURNEY

September 2025 – Present

Commenced formal software development training in September 2025 and have progressively developed practical proficiency across frontend and backend engineering.

My learning approach is predominantly project-driven, emphasizing the transformation of theoretical concepts into functional software. Through independent and academic projects, I have gained practical exposure to API engineering, databases, authentication, testing, asynchronous processing, message queues, system architecture, Git workflows, and application debugging.

I continue to deepen my expertise in the TypeScript and JavaScript ecosystem, with a particular focus on backend engineering, scalable systems, and reliable software architecture.

LANGUAGES

- English — Fluent
- Swahili — Native
